

Everest Yeti Official Report Unclassified

- **Date:** 19/11/2024
- **Case ID:** PIUC05
- **This report was conducted by:** Agent Coleman

Introduction

In 1951, a British explorer named Eric Shipton looking for an alternative route up Mt. Everest found a footprint that appeared to be hominoid. He took a picture, and the mystery of the Yeti—a Sherpa word for “wild man”—cast a spell over the world. Daniel Taylor, author of *Yeti: The Ecology of a Mystery*, has been searching for signs of this “Abominable Snowman” in the high Himalayas since he was a child.

Climbs for Everest come with a waiver acknowledging that if you die on the expedition your remains cannot be retrieved for appropriate burial, leaving your corpse as a guidepost until the day comes climate change melts enough of the snow and ice to cause the literal landfill Everest has become to come down and trigger an ecological disaster.

Findings

Aside from public reports surrounding this initial report, there has been no conclusive evidence to support this claim. Although there have been various reports over the years surrounding this cryptid, there is no solid evidence to support this theory.

It must also be noted that during the period this report was made, hoaxes across the world were also reported and documented by official sources suggesting that this particular case may have been a hoax or just a case of mistaken identity.

Recommendations

Overall, the recommendations that were made from this report were that of no conclusive evidence to support the theory of a cryptid.

Conclusion

To conclude this report, the findings show that the evidence presented were not conclusive enough to suggest that this was credible evidence of cryptid activity but instead supports the theories of a hoax or mistaken identity.

- Grade Level – CG1

- Alert Level – AL1
